Kellen T. Madigan

US Citizen | Atlanta, GA | 912-317-1566 | kmadigan3@gatech.edu | linkedin.com/in/kellen-madigan | github.com/MrKelabyte

PROFESSIONAL SUMMARY

Software Engineer and Georgia Tech Computer Science graduate returning for an M.S. in Computer Science (HCI), experienced in cross-platform mobile APIs (Kotlin/Swift), Unity/C# games, and Java/OOP curriculum at scale. Current New Games lead for Sign Game Labs and evaluator of AI-generated software and agentic workflows with DataAnnotation.

EDUCATION

Georgia Institute of Technology Atlanta, GA
Master of Science in Computer Science, Specialization: Human-Computer Interaction *May 2029*
Bachelor of Science in Computer Science, Threads: Intelligence and Media. *May 2026*
Relevant Coursework: Machine Learning, Deep Learning, Automata and Complexity Theory, Systems & Networks, Data Structures and Algorithms, Design and Analysis of Algorithms Honors

EXPERIENCE

AI Software Evaluator (Contract) July 2026 – Present
DataAnnotation *Atlanta, GA*
- Evaluate AI-generated software and agentic coding workflows, including task execution, tool usage, debugging behavior, and final output, for correctness, efficiency, and adherence to requirements.
- Complete coding and software reasoning tasks used to assess model capabilities across varied technical scenarios.
- Flag logic errors, edge cases, and inconsistencies in model output with actionable, spec-based feedback.

Georgia Tech Contextual Computing Group, VIP Program Atlanta, GA
New Games Lead, Sign Game Labs *Jan 2026 – Present*
- Lead New Games for Sign Game Labs, coordinating multiple ASL mobile game teams through Kanban workflows, recurring check-ins, and lead/co-lead delegation to improve task tracking and semester handoff.
- Created Quinn Signer and grew it from a solo prototype into a 6-person student development team, translating mission goals into scope-controlled tasks, weekly milestones, and playable build deliverables for both Android and iOS.
- Direct feature planning across active lab titles, including Quinn Signer, Hands of Valor, and Deafinitely Delicious.

Undergraduate Researcher, Cross-Platform API Development *Aug 2024 – Dec 2025*
- Ported the Sign Language Recognition Toolkit from Kotlin to Swift, producing an iOS-compatible API with matching recognition behavior and enabling its use across all iOS-based ASL mobile game projects.
- Wrote integration documentation and examples for developers, and debugged cross-platform behavior differences through logging, tracing, and prototyping to improve reliability across Android, iOS, and Unity Projects.

Teaching Assistant, CS 1331 Homework Lead Aug 2025 – May 2026
Georgia Institute of Technology *Atlanta, GA*
- Managed homework operations for 500+ students, coordinating rubrics, timelines, and grading across a 22-person TA team.
- Partnered with instructors to design, test, and review Java/OOP assignments with clear acceptance criteria.
- Mentored students in office hours and recitations on debugging, OOP design decisions, and software engineering principles.

PROJECTS

Quinn Signer | Creator, Lead Developer, & Game Director | Unity, C# Jan 2025 – Present
- ASL educational mobile game that helps hearing parents of Deaf children practice vocabulary through gameplay and signing.
- Built core gameplay systems integrating a sign language recognizer into user input, entity behavior, UI feedback, scene flow, persistent game state, and progression mechanics to teach ASL through active play.
- Implemented dictionary learning, training flow, encounters, reactive HUD feedback, missions, and multiplayer.

Hands of Valor | Game Director | Unity, C# Jan 2026 – Present
- ASL boss-battle mobile game where players defeat a boss by signing on-screen words before they expire, balancing timed, attacking, and parry words through a sign language recognizer.
- Direct design and scope through Kanban usage and lead-approved PR workflow, from prototype to Android/iOS builds.

Deafinitely Delicious | Game Director | Unity, C# Jan 2026 – Present
- ASL cooking adventure game where players study and sign food vocabulary while shopping, cooking through slicing, flipping, and stacking minigames, and serving recipes in a restaurant.
- Direct design and feature scope, guiding the team from screen prototypes to a full loop with tutorial and audio.

SKILLS

Programming Languages: Java, Python, JavaScript, C#, Swift, Kotlin, C/C++, HTML/CSS
Frameworks/Libraries: React, Spring, PyTorch, TensorFlow, NumPy
Software Engineering: OOP, OOD, REST APIs, Agile/Kanban, Cross-Platform Development, Technical Documentation
Tools: Git, GitHub, GitLab, Docker, Harbor
AI/ML: Deep Learning, Machine Learning, Neural Networks, Neuroevolution, Cooperative Coevolution
Game Development: Unity, Gameplay Programming, Mobile Development, UI Systems, Multiplayer Systems
